

**Transfection Reagent
that has never been so PALATABLE
to your cells before...**

DNAfectin™ 2100

- Reliable
- Affordable
- High Efficiency
- Lowest Toxicity
- Applicable to Most Cell Type

The BEST treat you can ever offer to your cells...
*Just because we understand there is no one method that applies to
all type of cells and application...*

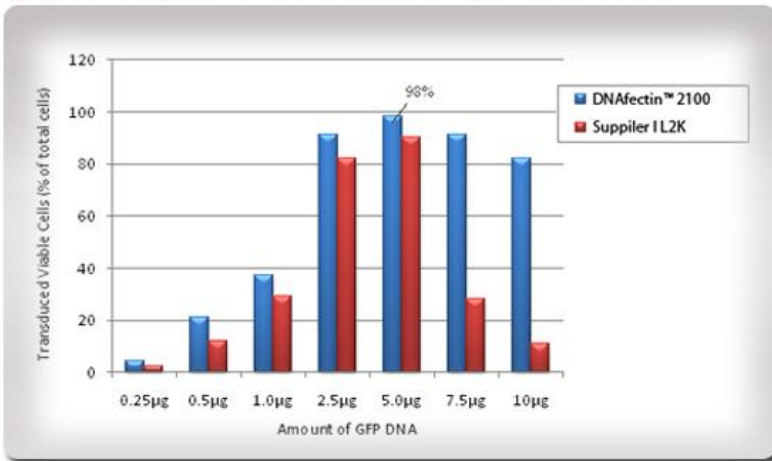

DNAfectin™ 2100 Transfection Reagent is a unique formulation of multiple polycations and liposomes that enable highly efficient and effective DNA transfection of eukaryotic cells. DNAfectin™ is the best transfection reagent for **over 15 different cell lines*** with over 50% transfection efficiency, including difficult-to-transfect, suspension, and primary cells. This transfection reagent is perfect for any of your transfection needs.

Cells Lines that work well with DNAfectin™ 2100

293T	SHEP	BOSC23	HT1080	C33A
MRC5	MDK+Telo	B16	MMAN	MDA-MB-231
HeLa	USO2 (T-USO2)	L6	A2780	MMRU

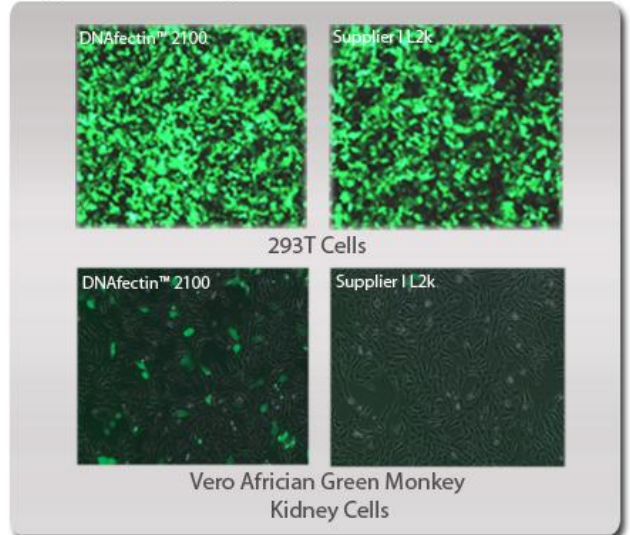

*For full list of cell lines, kindly refer to <http://www.abmgood.com/Transfection-Reagents/DNAfectin%E2%84%A2-Transfection-Reagents.html/3770>

Higher Viability of 293 Cells with DNAfectin™ 2100

Transfection efficiency and cell viability of 293 cells transfected with different amounts of GFP plasmid DNA in a 6-well cell culture plate. Results are recorded 48 hours after transfection.

Higher Efficiency with DNAfectin™ 2100
