

Custom Synthesis

Atheronal A

4,9-Anhydrotetrodotoxin

Rapamycin 42-succinate NHS ester

- Biotinylated Substrates
- Drug Metabolites
- Small Molecule Immunogens
- Fluorophore Tagged Molecules
- Lipids and Analogs
- Peptides and Peptide Mimetics
- SAR
- Chemical Tools
- Competitors Compounds

Focus Biomolecules provides expert custom synthesis of a wide range of unique or difficult to find compounds for life science research.

Contracting out custom organic synthesis can often be a frustrating process. We believe that open communication and honest assessment are as important as synthetic capability when it comes to providing excellent custom service.

We endeavor to price all custom synthesis projects fairly and keep customers informed and updated throughout the synthetic process. All synthetic and analytical work is done by highly experienced Focus Biomolecules chemists at our facility in Plymouth Meeting PA.

Please contact us so we can discuss your specific project needs and requirements.
