

ABM Inc. iPS Custom Services

iPSC generation is a completed cellular process, which is a time-consuming and technically challenging technique. Scientists at ABM have developed streamlined-line protocols for efficient iPSC generation with plasmid, viral vectors, and recombinant proteins. By outsourcing iPSC service to ABM, you will save time and money for your ongoing project.

Contact us for more details.

Ordering Information

Custom Service	Catalog No.	Time Required
iPSC Lentiviral Vectors	C052	6 months
iPSC Adenoviral Vectors	C053	6 months
iPSC DNA Minicircle	C054	6 months
iPSC Recombinant Proteins	C055	6 months
